

Project Title: EducationPathway – Higher Education Guidance Platform

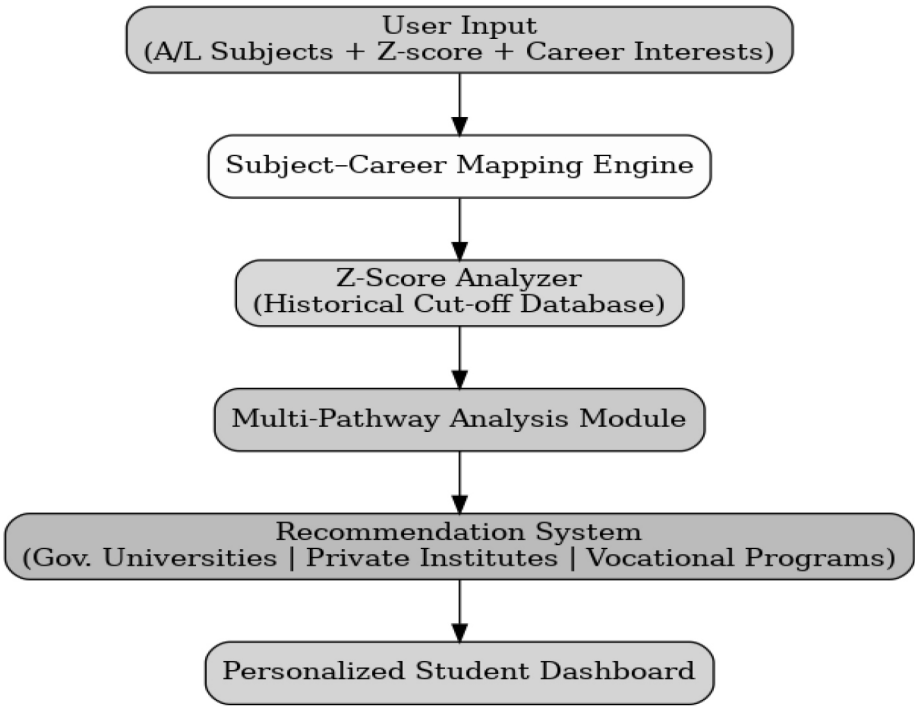

Live Website: <https://educationpathway.lk>

1. Introduction

Sri Lankan students face significant challenges in selecting suitable higher education pathways after completing their G.C.E. Advanced Level examinations. The decision-making process is often hindered by limited access to reliable career guidance, fragmented information on available institutions, and confusion regarding university admission cut-off marks.

EducationPathway Sri Lanka is a web-based platform designed to address this gap. It provides personalized guidance, course recommendations, and multi-pathway analysis for students based on their A-Level subject streams, Z-scores, and career interests. By integrating government university requirements, private institutions, and vocational training options, EducationPathway empowers students to make **informed, confident, and future-oriented decisions** about their academic and professional journeys.

2. Block Diagram

3. Working Principles

EducationPathway’s methodology is based on three interconnected components:

1. Subject-Career Mapping
 - Categorizes A-Level subject streams and links them with potential career paths.

- Uses a curated Sri Lankan higher education database for accurate mapping.

2. Z-Score Integration

- Incorporates real-time student Z-scores.
- Compares with historical cut-off marks to assess eligibility for government university programs.

3. Multi-Pathway Analysis

- Simultaneously evaluates multiple higher education opportunities:
 - Government universities (UGC recognized)
 - Private universities and affiliated colleges
 - Technical and vocational education and training (TVET) institutions
